Dear Triage Nurse;

This patient has had an exposure to HF – Hydrofluoric Acid. This is a life and limb threatening emergency in which time is of the essence. Please triage as a Level 2 case and have the ER physician see the patient immediately. There is a step by step protocol available on our INTRANET page under “*Patient Care Guidelines and Protocols*” which will describe the treatment necessary.

If you have questions you can always call the U of T Occupational health physician, **Dr. Gabor Lantos at 416-270-7147**

Sincerely,

David Dushenski MD CCFP(EM)
Chief, Department of Emergency Medicine
Sinai Health System, Mount Sinai Hospital
Assistant Professor, DFCM - University of Toronto
